

IN THE CLAIMS

Claim 1 (currently amended): A tool organizer comprising:
a housing including an upper plate and a bottom plate, each of
said upper and said bottom plates including a plurality of lock
channels formed therein, and said housing including a plurality of
posts secured between said upper and said bottom plates, each of
said posts including two ends engaged into said lock channels of
said upper and said bottom plates respectively, and

at least one tool holder including two sides, and a middle axle
provided between said two sides thereof and rotatably engaged with
said upper and said bottom plates, to rotatably secure said at least
one tool holder between said upper and said bottom plates, and

said at least one tool holder including a plurality of recesses
formed therein for receiving tool elements.

Claims 2, 3 (canceled).

Claim 4 (currently amended): The tool organizer as claimed in
claim ~~3~~ 1, wherein each of said upper and said bottom plates
includes at least one catch extended into each of said lock channels
thereof and engageable into said posts respectively, to secure said
posts to said upper and said bottom plates.

Claim 5 (original): The tool organizer as claimed in claim 4, wherein each of said posts includes at least one lock depression formed therein to receive said at least one catch of said bottom and said upper plates, and to secure said posts to said upper and said bottom plates.

Claim 6 (currently amended): ~~The tool organizer as claimed in claim 2, wherein~~ A tool organizer comprising:

a housing including an upper plate and a bottom plate, and including a plurality of posts secured between said upper and said bottom plates,

at least one tool holder including two sides, and a middle axle provided between said two sides thereof and rotatably engaged with said upper and said bottom plates, to rotatably secure said at least one tool holder between said upper and said bottom plates,

said at least one tool holder including a plurality of recesses formed therein for receiving tool elements, and

each of said posts includes including two curved side surfaces to allow said ~~tool holders~~ at least one tool holder to be suitably retained between said posts.

Claim 7 (original): The tool organizer as claimed in claim 1 further comprising a container received in said housing.

Claim 8 (original): The tool organizer as claimed in claim 7, wherein said housing includes a bore formed in said upper plate to receive said container into said housing.

Claim 9 (currently amended): ~~The tool organizer as claimed in claim 8, wherein~~ A tool organizer comprising:

a housing including an upper plate and a bottom plate, said upper plate ~~includes~~ including at least one lock notch formed therein,

at least one tool holder including two sides, and a middle axle provided between said two sides thereof and rotatably engaged with said upper and said bottom plates, to rotatably secure said at least one tool holder between said upper and said bottom plates,

said at least one tool holder including a plurality of recesses formed therein for receiving tool elements,

a container received in said housing, said housing including a bore formed in said upper plate to receive said container into said housing, and said container ~~includes~~ including at least one projection extended outwardly therefrom, to engage into said at least one lock notch of said upper plate, and to detachably retain said container in said housing.

Claim 10 (original): The tool organizer as claimed in claim 9, wherein said container includes a lock slot formed in said at least one projection thereof, and further includes a cover having at least one tongue extended outwardly therefrom, to engage into said lock slot of said container, and to detachably retain said cover to said container.

Claim 11 (original): The tool organizer as claimed in claim 7 further comprising a cover engageable and attachable onto said container, to enclose said container.

Claim 12 (original): The tool organizer as claimed in claim 1 further comprising a base, said housing being rotatably secured on said base with a shaft.

Claim 13 (original): The tool organizer as claimed in claim 12, wherein said base includes a plurality of ball bearings provided thereon and engaged with said housing, to smoothly and stably support said housing on said base.

Claim 14 (currently amended): A tool organizer comprising:
a housing including an upper plate and a bottom plate, each of said upper and said bottom plates including a plurality of lock channels formed therein,

at least one tool holder rotatably secured between said upper and said bottom plates, and said at least one tool holder including two sides, and a middle axle provided between said two sides thereof and rotatably engaged with said upper and said bottom plates, to rotatably secure said at least one tool holder between said upper and said bottom plates, and

a plurality of posts to be secured between said upper and said bottom plates, each of said posts including two ends engaged into said lock channels of said upper and said bottom plates respectively, and each of said upper and said bottom plates including at least one

catch extended into each of said lock channels thereof and engageable into said posts respectively, to secure said posts to said upper and said bottom plates.

Claim 15 (original): The tool organizer as claimed in claim 14, wherein each of said posts includes at least one lock depression formed therein to receive said at least one catch of said bottom and said upper plates, and to secure said posts to said upper and said bottom plates.

Claim 16 (original): The tool organizer as claimed in claim 14, wherein each of said posts includes two curved side surfaces to allow said at least one tool holder to be suitably retained between said posts.

Claim 17 (canceled).

Claim 18 (currently amended): ~~The tool organizer as claimed in claim 14 further comprising~~ A tool organizer comprising:
a housing including an upper plate and a bottom plate, each of
said upper and said bottom plates including a plurality of lock
channels formed therein,
at least one tool holder rotatably secured between said upper
and said bottom plates,
a plurality of posts to be secured between said upper and said
bottom plates, each of said posts including two ends engaged into
said lock channels of said upper and said bottom plates respectively,

and each of said upper and said bottom plates including at least one catch extended into each of said lock channels thereof and engageable into said posts respectively, to secure said posts to said upper and said bottom plates, and

a container received in said housing, said housing including a bore formed in said upper plate to receive said container into said housing.

Claim 19 (original): The tool organizer as claimed in claim 18, wherein said upper plate includes at least one lock notch formed therein, said container includes at least one projection extended outwardly therefrom, to engage into said at least one lock notch of said upper plate, and to detachably retain said container in said housing.

Claim 20 (original): The tool organizer as claimed in claim 19, wherein said container includes a lock slot formed in said at least one projection thereof, and further includes a cover having at least one tongue extended outwardly therefrom, to engage into said lock slot of said container, and to detachably retain said cover to said container.
